## **DECLARATION**

We hereby declare that the work presented in this project entitled **“CANCER PREDICTION USING GENETIC ALGORITHMS”** submitted towards completion of the major project in IV year of B.Tech IT at “BVRIT HYDERABAD COLLEGE OF ENGINEERING FOR WOMEN”, is an authentic record of our original work carried out under the esteem guidance of Ms. M. L. Prashanthi Associate Professor, IT department.

## **Department of Information Technology**

### **Certificate**

This is to certify that the Project report on “**CANCER PREDICTION USING GENETIC ALGORITHMS**” is a bonafide work carried by G.D.Ramya Shruthi(16WH1A1223), N. Pujitha (16WH1A1233), M.Snigdha(16WH1A1240) in the partial fulfillment for the award of B.Tech degree in **Information Technology, BVRIT HYDERABAD COLLEGE OF ENGINEERING FOR WOMEN, Bachupally, Hyderabad**, affiliated to Jawaharlal Nehru Technological University, Hyderabad under my guidance and supervision.

The results embodied in the project work have not been submitted to any other University or Institute for the award of any degree or diploma.

**Internal Guide**

**Ms. M. L. Prashanthi**

**Associate Professor**

**Department of IT**

**Head of the Department**

**Dr. Aruna Rao S L**

**Professor and HOD**

**Department of IT**

**External Examiner**

## **Acknowledgements**

We would like to express our sincere thanks to **Dr. K. V. N. Sunitha, Principal**, BVRIT HYDERABAD, for providing the working facilities in the college.

Our sincere thanks and gratitude to **Dr. ArunaRao S L, Head**, Dept. of IT, BVRIT HYDERABAD for all the timely support and valuable suggestions during the period of our project.

We are extremely thankful and indebted to our internal guide **Ms. M. L. Prashanthi, Associate Professor, Department of IT**, BVRIT HYDERABAD for her constant guidance, encouragement and moral support throughout the project.

Finally, We would also like to thank our project co-coordinator, all the faculty and staff of IT Department who helped us directly or indirectly, parents and friends for their cooperation in completing the project work.

**G. D. Ramya Shruthi**

## **ABSTRACT**

Using genetic algorithms, we attempt to find an optimal and intelligent solutions. Here, we have taken cancer prediction as an example and to improve its accuracy we have used genetic algorithms instead of backpropagation. We apply different algorithms like Neural Networks. Genetic algorithm is very much useful in finding the optimal initializing weights which helps in getting more accuracy.

There are four phases in executing a genetic algorithm. They are initialize population, selection, crossover and mutation. The first phase is gathering the population for optimization. In the selection phase, the best solutions are determined using some form of objective function also known as a 'fitness function' in genetic algorithms, before being passed to the crossover phase. Different methods for choosing the best solutions exist, for example, fitness proportionate selection and tournament selection; different methods may choose different solutions as being 'best'. Crossover is the process of taking more than one parent solutions and producing a child solution from them. By recombining portions of good solutions, the genetic algorithm is more likely to create a better solution. The mutation phase encourages genetic diversity amongst solutions and attempts to prevent the genetic algorithm converging to a local minimum by stopping the solutions becoming too close to one another. In mutating the current pool of solutions, a given solution may change entirely from the previous solution.

## LIST OF FIGURES

Figure No	Figure Name	Page No
1	Architecture Of Neural Networks	4
2	Importing libraries	8
3	Simple Structure Of A Neural Network	9
4	Function Of A Neuron	9
